

ENERGY USE

(Extraction, Transport & Production)

WHAT'S COVERED

- Fossil fuel consumption at each stage: raw material extraction, processing, transport
- Excludes consumer-facing steps (e.g., after bagging)
- Encourages renewable energy use, efficiency measures

EVIDENCE NEEDED

- Supply chain map showing distance & transport modes
- Fuel and electricity consumption records
- Invoices or meter readings for on-site renewable energy
- Calculations or references to standard conversion factors

WAYS TO IMPROVE

- Increase renewable energy use (e.g., solar, wind, biomass)
- Optimise transport logistics to reduce distances or empty runs
- Maintain machinery to enhance fuel efficiency
- Train staff to switch off engines and equipment when not in use
