

Delve into the core criteria of the Responsible Sourcing Scheme, ensuring transparency and commitment to better practices across the board.

Energy Use

What's Covered?

- Energy consumption during extraction, transport, and production stages.
- Consideration of energy from fossil fuels like electricity, diesel, and fuel oil.
- Transport energy, especially for road-based transport and specialist vehicles.
- Energy use in the production and transport of various raw materials, from coir pith to cork.

Evidence Needed:

- A detailed supply chain map.
- Records of fossil fuel energy use in production.
- Calculations of transport energy across the supply chain.
- Proof of renewable energy generation and consumption, if applicable.

Ways to Improve:

- Adopt more renewable energy sources.
- Enhance the energy efficiency of production processes.
